

Project Executable Files

Date	10/07/2026
Name	Vakade Kishor
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files:

This section contains all executable and deployable files required to run the **Credit Card Approval Prediction** project. The project is built using Python and machine learning libraries to predict whether a credit card application should be approved or rejected based on applicant details. The solution includes the trained ML model, source code, datasets, and documentation for easy deployment and execution.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files	NA
5	Environment configuration (.env.example)	No
6	Hosted / Deployed Application URL	No
7	APK / Executable Binary	NA
8	Dockerfile / Containerization config	No
9	Test files and test results	Yes
10	Demo Video / Walkthrough	Yes

Step 2: File / Folder Structure

```
CREDIT-CARD-APPROVAL-PREDICTION/

|
|-- .vscode/
|   |-- launch.json          # VS Code debugger configuration
|
|-- data/
|   |-- credit_card_data.csv  # Dataset used for training and testing
|
|-- models/
|   |-- credit_card_model.pkl # Trained Machine Learning model
|
|-- notebooks/
|   |-- credit_card_prediction.ipynb # Exploratory Data Analysis & Model Development
|
|-- static/
|   |-- css/
|   |   |-- style.css        # CSS styling
|   |-- js/
|   |   |-- script.js        # JavaScript functions
|   |-- images/              # Images used in the application
|
|-- templates/
|   |-- landing.html          # Landing page
|   |-- index.html            # Credit Card Application Form
|   |-- result.html           # Prediction Result Page
|
|-- app.py                    # Main Flask application
|-- train_model.py            # Machine Learning model training script
|-- predict.py                # Prediction logic
|-- requirements.txt           # Python dependencies
|-- README.md                 # Project documentation & setup guide
|-- .gitignore                # Git ignored files
|-- LICENSE                   # Project license (optional)
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Hosted(Runs Locally)
Login Credentials	Not Required
Platform / Hosting Provider	Local Machine (Python + Flask)
Repository Link	https://github.com/vakadekishor/Credit-Card-Approval-Prediction
Demo Video Link	https://drive.google.com/file/d/111RNIVooraCa8fs8V8Uwmr7BePGC1CQ8/view?usp=drivesdk

Step 4: Run Instructions

1. Clone or download the **Credit Card Approval Prediction** project repository.
2. Install the required Python dependencies using **requirements.txt**.
3. Run the Flask application using **app.py**.
4. Open your web browser and navigate to **http://127.0.0.1:5000**
5. Enter the applicant details (Age, Annual Income, Employment Duration, Payment Status, Credit Inquiries, etc.) and click **Predict**.
6. View the **Credit Card Approval Prediction** result (Approved/Rejected) displayed on the result page.

Step 5: Known Issues / Limitations

S.No	Known Issue	Workaround / Status
1	Runs locally using Flask only	Can be deployed on Render, AWS, or Azure
2	Uses CSV dataset instead of a live banking database	Future enhancement can integrate MySQL/PostgreSQL
3	No user authentication or login module	Authentication can be added in future versions using Flask-Login or JWT
