

Project Demo Planning

Date	10/07/2026
Name	Vakade Kishor
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo plan ensures that the Credit Card Approval Prediction project is presented in a clear, logical, and effective manner. The demonstration covers the problem statement, solution architecture, exploratory data analysis, live prediction using the Flask application, and the final project outcome. Since this is an individual project, all demo activities are performed by the project developer. The project demonstrates an automated machine learning system that predicts whether a credit card application should be approved or rejected based on applicant information.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Project Introduction	Explain the banking problem, project objectives, and need for automated credit card approval prediction.	2	Self
2	Solution Overview	Present the system architecture, dataset, machine learning workflow, and technologies used (Python, Scikit-learn, Flask).	3	Self
3	Exploratory Data Analysis (EDA)	Demonstrate approval status distribution, annual income vs approval status, and feature distribution graphs to explain dataset insights.	3	Self
4	Live Application Demonstration	Show the Flask web application,	3	Self

		enter applicant details, preprocess inputs, and generate prediction (Approved/Rejected).		
5	Prediction Result & Model Explanation	Explain the prediction output, confidence/probability, and how the trained ML model makes decisions.	2	Self
6	Conclusion & Q&A	Summarize project benefits, future enhancements, and answer evaluator questions.	1	Self

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Explain challenges of manual credit card approval, project objectives, and expected benefits.
2	Solution Overview	Present dataset features, preprocessing, machine learning model, Flask integration, and overall architecture.
3	Live Feature Demonstration	Show EDA charts, enter applicant details into the web application, perform prediction, and display approval/rejection result.
4	Q&A Session	Discuss model performance, project limitations, future enhancements, and respond to evaluator questions.
